# Debian Package Maker for class room teaching
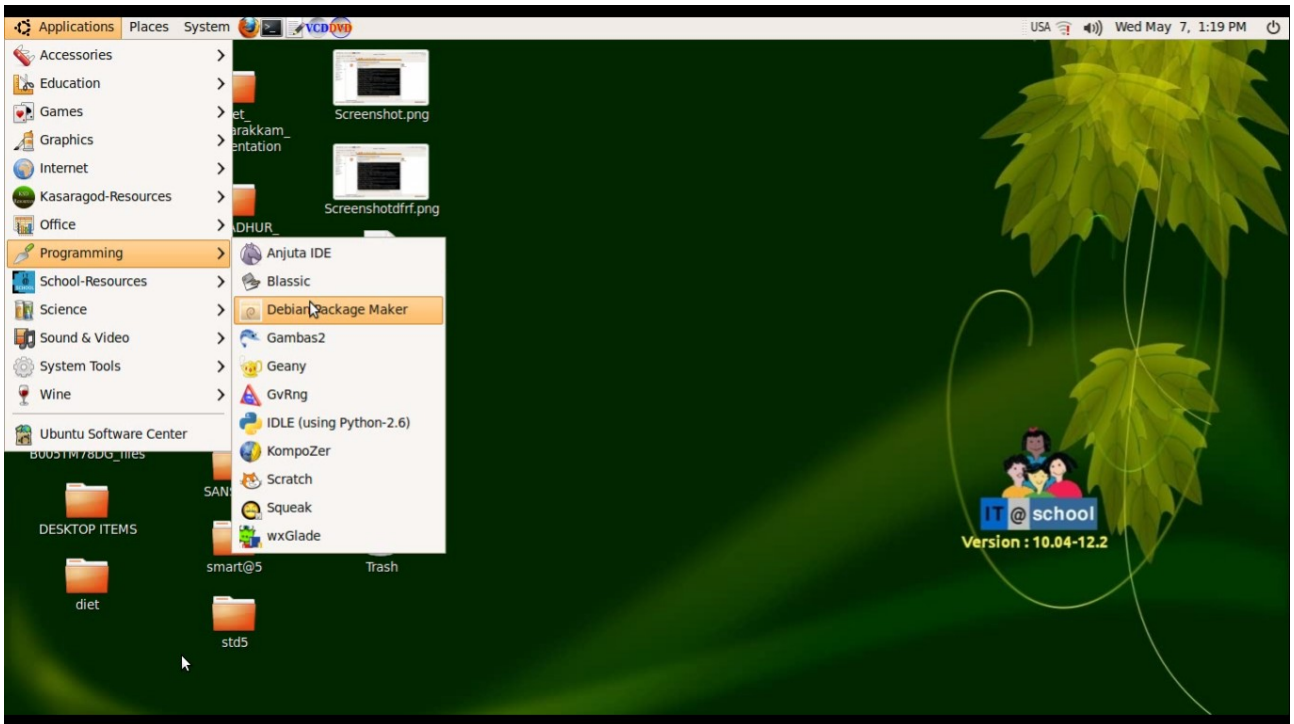

*Copy the content folder to home directory and rename the folder to **files**

files folder -ൽ index.html ഉണ്ടായിരിക്കണം അതാണ് execute ചെയ്യുന്നത്

First click select button

You are prompted to give package Name.Do not use spaces or special characters
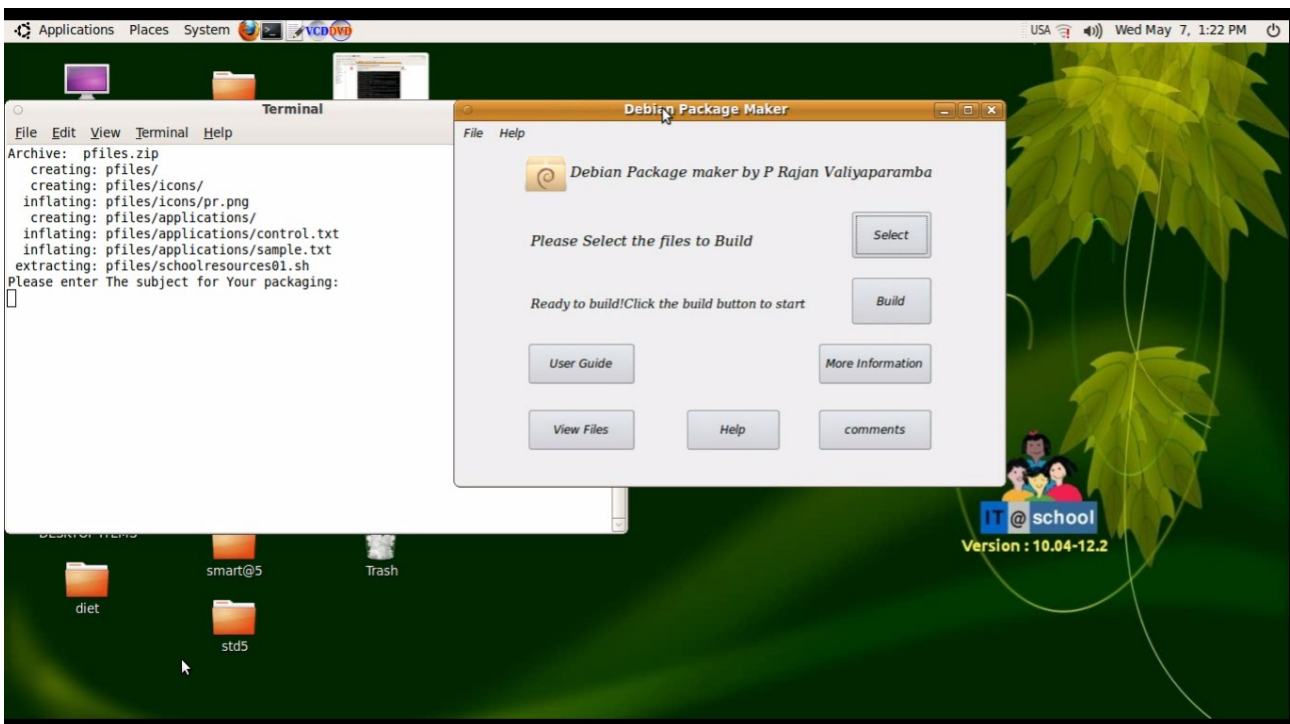

Next Click build button to start build process.
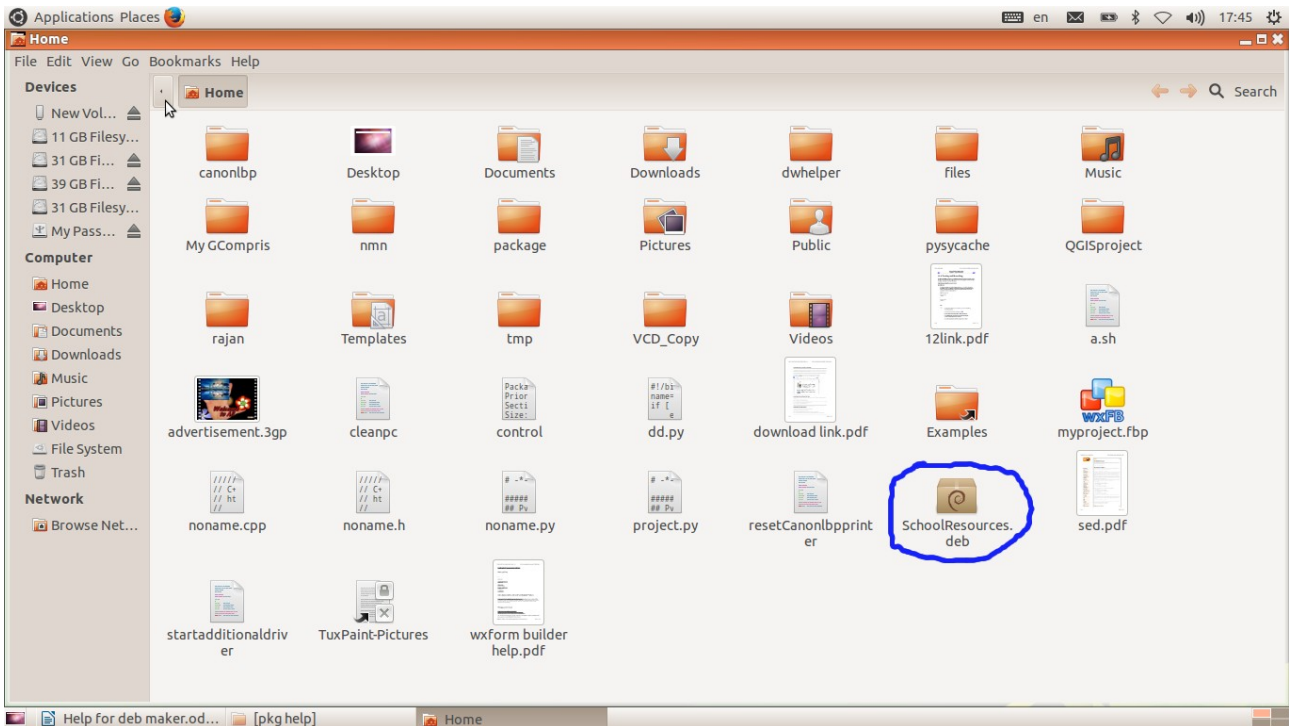

You must enter a package Name without spaces.

It is the name of your application found in the Application-School-Resources menu.

For eg If you enter **Biology** your application may be **Biology Resources**

Home folder automatically open when the build process complets.

Install **SchoolResources.deb**

Uninstalling SchoolResources created by Debian package maker

Remember the package name, you entered during the build process when selecting files.If you enter **maths** your package name may be **resourcesmaths.**Search for that package .Select the package and mark it for complete remaval and then Apply
