## **WET-02 : Ubuntu - printer sharing on network-more easy**

It is very easy to share a printer on ubuntu network. Two kinds of configuration is needed.

## A. Configuration on server(computer on which printer is connected) do the following steps

1. Open the printer configuration window: Sysytem --> administration --> printing

	Printer configuration - localhost	
The window	<u>Server</u> <u>Printer</u> <u>Group</u> <u>View</u>	<u>H</u> elp
appears as just as the picture	New V	Eilter: Q
	Connected to localhost	

2. click on the 'Server' menu of the printer configuration window and click on 'settings...' portion. Another window appears

<ul> <li>Basic Server Settings</li> </ul>			
Basic Server Settings			
Show printers shared by other systems Problems?			
<u>P</u> ublish shared printers connected to this system			
Allow printing from the Internet			
Allow remote administration			
<ul> <li>Allow <u>u</u>sers to cancel any job (not just their own)</li> </ul>			
Save <u>debugging</u> information for troubleshooting			
Advanced Cancel OK			

3. just click on three check boxes as shown in the picture and press 'OK' button Basic Server Settings

Basic Server Settings X				
Basic Server Settings				
Show printers shared by other systems Problems?				
Publish shared printers connected to this system				
Allow printing from the Internet				
Allow remote administration				
<ul> <li>Allow <u>u</u>sers to cancel any job (not just their own)</li> </ul>				
Save <u>debugging</u> information for troubleshooting				
Advanced Cancel OK				

## **B.** Configuration on client computers(all other computers)

do the following configurations on all other computers :

1. Open the printer configuration window: Sysytem --> administration --> printing

	O Printer configuration - localhost		
The window	<u>Server</u> <u>Printer</u> <u>G</u> roup <u>V</u> iew	Help	
appears as just as the picture	New 🗸 🧲	<u>F</u> ilter: Q	
	Connected to localhost		

2. click on the 'Server' menu of the printer configuration window and click on 'settings...' portion. Another window appears

Basic Server Settings         X		
Basic Server Settings		
Show printers shared by other systems <u>Problems?</u>		
<u>Publish shared printers connected to this system</u>		
Allow printing from the Internet		
Allow <u>remote</u> administration		
Allow users to cancel any job (not just their own)		
Save <u>debugging</u> information for troubleshooting		
<u>A</u> dvanced <u>C</u> ancel <u>O</u> K		

3. Just click on three check boxes as shown in the picture and press 'OK' button

O Basic Server Settings X				
Basic Server Settings				
Show printers shared by other systems Problems?				
<u>P</u> ublish shared printers connected to this system				
Allow printing from the Internet				
Allow remote administration				
Allow users to cancel any job (not just their own)				
Save <u>debugging</u> information for troubleshooting				
Advanced Cancel OK				

4. wait for some time the printer icon from the server computer will appear on the printer configuration window.
